COMPUTER SYSTEM WITH PASSIVE WIRELESS MOUSE

RELATED APPLICATION INFORMATION

09978615

The present application is a continuation in part of application serial no. ^ , filed October 16, 2001, for Computer System With Passive Wireless Keyboard, the disclosure of which is incorporated herein by reference. The present application further claims priority under 35 USC 119 (e) to provisional application serial no. ^ 60/241178 filed 10/17/2000 and 60/244,611 filed November 1, 2000, the disclosure of which is incorporated herein by reference. The present application claims priority under 35 USC 119 (e) to provisional application serial no. 60/257,479 filed December 21, 2000, the disclosure of which is incorporated herein by reference.

BACKGROUND OF THE INVENTION

1. Field Of The Invention

The present invention relates to wireless mouse controllers and computer systems employing wireless mouse controllers. The present invention further relates to methods of wireless control of computer systems.

2. Description of the Prior Art and Related Information

Wireless mouse controllers have a number of advantages over the more common wire connected mouse controllers employed in computer systems. First of all, wireless mouse controllers offer more flexibility to the user to position him or her self relative to the computer. This can reduce strain and tiredness associated with computer use. Also, wireless mouse controllers reduce the amount of wires connected over or around a desktop and reduce clutter and complicated wiring tangles. This also creates a cleaner look to the overall system and can give the computer system a more sophisticated and/or expensive look.
